

■ ACHIEVEMENTS OF THE FORUM (1994 - July, 2004)

In starting the forum the following message was sent from chairman Dr. Tadao Saito in 1994.

Ever since the Japanese Ministry of Posts and Telecommunications announced the "Program for the Establishment of High-Performance Info-Communications Infrastructure" (May 1994), and the Ministry for International Trade and Industry the "Program for Advanced Information Infrastructure" (May 1994), efforts towards a full-fledged multimedia environment has been taking place in Japan.

Likewise, the promotion of information infrastructure is increasingly recognized as a global issue and challenge, as we have seen in the "Global Information Infrastructure (GII) Initiative" discussed in the Naples G-7 Summit (July 1994).

Now in Japan, we see serious emerging problems: the struggles to emerge from the prolonged structural recession after the collapse of bubble economy, the advent of the aging society, the need to reinvigorate the civil society that has come of age, etc. Economically, and socially, we are facing a "structural deadlock".

However, multimedia is expected to make the breakthrough. The whole country is placing its hopes on this promising field, that the realization of a true multimedia environment may show us the way out of the "structural deadlock" we are in.

In the meanwhile, the ever-confident US multimedia industry is making dynamic movements to take the lead in the

global market. And so it would be most important for us to catch up with the US, and thus contribute in the information infrastructure initiative promoted by the government.

According to estimates, by 2010, the Japanese multimedia industry is expected to grow to a 120 trillion yen market, employing over 2.4 million workers.

But the process would not be easy. In order to succeed in the multimedia industry, we would have to cross the conventional boundaries such as the country, the industry, and all individual technologies. Restructuring of the industrial and social system would also be necessary. In other words, it is bound to be an unprecedented national challenge in which we must get together to build a new society.

Of course, multimedia still seems to have the uncertainties of being a mere "transient boom" or simply "not so promising". And there still remain the unpredictable issues that will surely arise in the future. We may even lag behind the US after all.

The new "Multimedia Promotion Forum" was thus established, supported by significant leaders of key sectors who shared the common awareness.

The Multimedia Promotion Forum now holds about three to four discussions a month to keep abreast of the rapid developments in the communications field, and to facilitate a free exchange of opinions for those in the industry, the academia, the government, and the political world. The multimedia environment is ever progressing. It will certainly be our greatest pleasure to contribute in a “successful realization of the coming multimedia environment”, and more broadly for a “sound development of the multimedia industry”.
